School of Engineering
ACADEMIC YEAR 2026/27

Assessment Brief

Submission details

Module title: Engineering Practice 2

Module code: UFMFQS-15-2

Assessment title: Group Presentation

Assessment type: Presentation

Assessment weighting: 100% of total module mark

Size or length of assessment: 20 min (15 min presentation + 5 min Q&A)

Module learning outcomes assessed by this task:

1. Apply knowledge of engineering project management principles in practical, real-world scenarios

2. Demonstrate a comprehensive understanding of the commercial context within engineering project to design a sustainable business model

3. Function effectively as an individual, and as a member or 'leader' of a team

Use of AI in assessment:

The use of generative AI is permitted in preparing your group presentation and can be a valuable tool to enhance your work. You may use AI for various purposes such as conducting preliminary research, assisting with brainstorming ideas, or even creating visual aids like infographics and charts. Additionally, AI can be helpful for spell and grammar checks to ensure your presentation is polished and professional. However, it is important to remember that while AI can support your efforts, it cannot replace the critical thinking and originality expected in your assignment.

If you use AI beyond basic tasks like grammar and spell-checking, such as generating detailed content or creating AI-generated images, you are required to acknowledge its use. This should be done by referencing the AI tools within your presentation materials. Please see our specific guidance on referencing generative AI and our general introduction to referencing at UWE Bristol.

While AI can be a useful resource, be mindful of its limitations. AI-generated content may sometimes contain inaccuracies, biases, or irrelevant information. It is your responsibility to thoroughly review and validate any AI-generated content before incorporating it into your final presentation. Ensure that any information or visuals used are both accurate and appropriate for the scope of your project.

Guidance on Referencing (inc AI):
Please note that the aim of referencing is to demonstrate you have read and understood a range of sources to evidence your key points. You need to list the references consistently and in such a way as to ensure the reader can follow up on the sources for themselves. Any referencing style is permitted, as long as it is applied consistently throughout the presentation.
Referencing - Study skills | UWE Bristol
Using generative AI at UWE Bristol - Study skills | UWE Bristol

Submission and feedback dates

Submission deadline:

1) PPT slides and group meeting minutes: Before 17:00 on Friday 20th November 2026
2) Day of presentation: The presentation will take place between 23 November 2026 and 4 December 2026 and will be scheduled during your timetabled tutorial session. You will be allocated a specific date within this period.

N.B. there is no 48-hour late submission window for this assessment.

Deliverables and submission format:

1) Presentation File (PowerPoint): This is a group submission.
2) Group Meeting Minutes (Word/PDF): This is a group submission and must be submitted with the presentation file to the same submission point.
3) Group Presentation (in class)

Feedback Release: Feedback and marks will normally be available within 20 working days of your presentation date.

N.B. All times are 24-hour clock, current local time (at time of submission) in the UK.

Marks and Feedback will be provided via: Blackboard

Completing your assessment

What am I required to do on this assessment?

Assignment task

Your Project Week task is to develop a compelling project proposal for an innovative engineering or technological solution that addresses the *Engineering Innovation for Sustainable Futures* outlined in the project brief. We encourage you to think boldly and disruptively, while keeping the feasibility of your ideas in mind. The emphasis should be on

applying the principles of engineering project management you've learned so far, rather than on technical design details or engineering calculations. That said, we are excited to see the creativity and originality in the ideas you bring forward.

On your presentation day, which will be scheduled during your timetabled tutorial session between 23 November 2026 and 4 December 2026, your group will present its project in the form of a *Critical Project Review* to key stakeholders. A specific presentation date will be allocated to your group within this period. Your proposed solution should offer a practical and financially viable approach to a more sustainable future.

A great idea isn't enough—you need a solid plan. Your group should outline how your project will be executed using available resources (human, financial, knowledge, etc.). This includes understanding how to source and effectively use these resources to ensure the project's success. Develop good communication and effective work plan in your team.

Environmental sustainability is a key part of this project. Your group must conduct thorough research and make informed decisions to ensure your project either reduces or has no negative impact on the environment.

<u>Presentation components</u>

You will present your engineering project idea, intended for project funders and other key stakeholders. Additionally, your group will need to practice the art of delivering the presentation effectively. Clear communication is fundamental for garnering support and potentially attracting funding or partners for your project.

Your group presentation should include the following components in sufficient detail:

1. Team vision and project initiation

: Every project starts with the idea, project team and vision. Consider introducing your group members, problems to solve and opportunities that your proposal aims to address. What is your team identity, vision and long-term ambition? Think of the Dragon's Den and the art of delivering impactful pitch. Identify problems or needs that could be addressed through engineering solutions (What is the problem or need? Why is it important to solve?). Present the initial problem you want to tackle, your project idea, explaining existing solutions and identify gaps or opportunities.

2. Project scope and planning

: Scoping your idea including project specification, constraints, limitations, assumptions, and technical requirements. Preparing the project including planning and scheduling using planning tools (Gantt chart, WBS, network diagrams and critical path analysis).

3. Resourcing and cost management

: This includes resources allocation, cost estimation and management within the context of project scheduling.

4. Stakeholder and risk management

: This includes stakeholder analysis, risk management, communication plan and identifying any negotiation and conflict resolution requirements.

5. Sustainability

: Assessing how the project contributes to reducing environmental impact and promoting sustainability through energy efficiency, waste reduction, or the use of sustainable materials. Also consider how other activities might be affected by your project; net-zero for your activity must not cause Plus-Zero anywhere else.

6. Business context

: Analysing the market opportunity based on understanding the competitive landscape and demonstrating how your project creates value for stakeholders or customers. Financial projections, ROI, and feasibility are key considerations and need to be sufficiently supported by data.

Where should I start?

Each tutorial session covers all the necessary elements for this assignment.

What do I need to do to pass?

Refer to the marking criteria and ensure you achieve a minimum mark of 40%.

How do I achieve high marks in this assessment?

To achieve high marks, refer to the marking criteria. Success goes beyond simply covering the required elements. Focus on generating good ideas, conducting thorough research, paying attention to detail, delivering a professional presentation, showing passion in your work, and fostering effective collaboration within your group.

How does the learning and teaching relate to the assessment?

The module covers all topics related to the assessment each week through lectures and tutorials.

What do I do if I am concerned about completing this assessment?

It is recommended that you review all of the relevant materials on Blackboard. You can also speak to your tutor or module leader (iwona.gajda@uwe.ac.uk) for advice and guidance.

UWE Bristol offer a range of Assessment Support Options that you can explore through this link, and both Academic Support and Wellbeing Support are available.

For further information, please see the Student study essentials.

How do I avoid an Academic Integrity breach on this module?

Use the support above if you feel unable to submit your own work for this module.

Avoid plagiarism by not copying someone else's work without proper referencing, submitting another student's work (who is not part of your group), or using content from the web or AI tools without acknowledgment. If you're unsure, refer to academic-conduct-policy-and-academic-misconduct-procedures.pdf

Marks and Feedback

Your assessment will be marked according to the following marking criteria.

You can use these to evaluate your own work before you submit.

UWE Bristol's Academic Integrity Policy and Procedures is available from the Academic Integrity webpages and requires that you submit work that is entirely your own and reflects your own learning, so it is important to:

- Ensure you reference all sources used, using the guidance available on UWE's Study Skills referencing pages.
- Refer to peer reviewed primary sources, rather than using AI or secondary sources
- Avoid copying and pasting any work into this assessment, including your own previous assessments, work from other students or internet sources
- Develop your own style, arguments and wording, so avoid copying sources and changing individual words but keeping, essentially, the same sentences and/or structures from other sources
- Never give your work to others who may copy it

When submitting your group work, you will be required to confirm that the work is your group's own, and text-matching software and other methods are routinely used to check submissions against other submissions to the university and internet sources. Details of what constitutes plagiarism and how to avoid it can be found on UWE's Study Skills pages about avoiding plagiarism.

Peer Assessment

Students' individual marks will be calculated from the group mark, taking peer assessments into account. The peer assessment score will be calculated using the IPAC system (https://app.ipac-app.education/help/methodology/methodology.html). To support this,

students will be required to complete peer assessment questionnaires at several points during the module.

Peer assessment must be completed individually. Please note that you are not evaluating your group members' level of achievement, but rather their engagement and contribution to the group. Guidance on how to complete the peer assessment and instructions for submission will be provided during tutorial sessions.

When assessing each of your group members, use the checklist below to guide your decisions:

- Communication with other group members.
- Respect for other team members in decision-making.
- Ability to give constructive feedback to other group members.
- Capacity to listen and respond to constructive feedback.
- Ability to set appropriate tasks and deadlines.
- Ability to meet internal deadlines agreed within the group.
- Application of creative problem-solving.
- Contribution of materials / ideas.
- Equity of contribution to the group assignment

Percentage Mark	<30%	30 – 39%	40-49%	50-59%	60-69%	70-79%	80%+	Mark (%)	Weighed mark
Assessment criteria / descriptors	**Very poor**	**Poor**	**Weak**	**Good**	**Very good**	**Excellent**	**Outstanding**		
Scope and Schedule Management (15%) In-depth problem statement, an innovative project concept with a well-defined scope, specifying project requirements, constraints, limitations, assumptions, and technical prerequisites. Clearly define the project's objectives and deliverables, supported by a comprehensive work breakdown structure. The project schedule should be realistic, well-organised, and demonstrate effective time management, with logically sequenced tasks and achievable milestones.									
Resource and Cost Management (15%) Present a thorough allocation of resources and cost estimates, incorporating both a resource histogram and cost projections within the project schedule. Demonstrate a comprehensive understanding and effective allocation of human, material, and financial resources. Provide realistic cost estimates with careful budget considerations. Resource planning should reflect optimisation and efficiency.									
Stakeholder and Risk Management (15%) A clear stakeholder analysis, including a well-structured communication plan and an identification of negotiation and conflict resolution needs. Demonstrate rigorous risk management through comprehensive risk identification, assessment, and effective mitigation strategies. Ensure that stakeholder communication is well-planned and effective.									
Sustainability (15%) The group must demonstrate that their project not only solves an engineering problem but does so in an environmentally responsible way. Assess how the project contributes to reducing environmental impact and promoting sustainability through energy efficiency, waste reduction, or the use of sustainable materials.									
Business Case and Market Understanding (15%) A compelling business case for your proposed project, including a clear understanding of the market and industry dynamics. The group need to analyse the market opportunity, understand the competitive landscape, and demonstrate how their project creates value for stakeholders or customers. Financial projections, ROI, and feasibility are key considerations and need to be sufficiently supported by data.									
Overall Presentation Performance (20%) Visually appealing presentation slides are a clear, well-placed delivery of the presentation with 15 min. Ensure that the presentation is lively, imaginative, and engaging, with meaningful contributions from all group members. Provide accurate and comprehensive responses to all questions, including detailed explanations as needed.									
Group Meeting Minutes (5%) A collection of concise meeting minutes in a consistent format. Include essential details such as the date, attendees, agenda items, discussion points, decisions, and action items. Clearly state any actions, decisions, or resolutions, specifying who is responsible for each action item and the due date for completion.									
Overall mark (%)
